EDUCATION

University of Wisconsin-Madison

Madison, WI

Bachelor of Science in Computer Science & Data Science — GPA: 3.7/4

Sep. 2023 - May 2027

- **Coursework:** Data Structures & Algorithms, OS, Big Data Systems, Database Management & Systems

EXPERIENCE

HG Insights

Santa Barbara, CA

AI Intern

May 2026 – Current

- Engineered an automated intent-classification pipeline on Databricks (PySpark, SQL warehouse, Foundation-Model embeddings + LLM) that sorts 21,000 B2B intent topics weekly into company taxonomy and semantic product-matching, collapsing 4.2 B weekly raw signal rows into one scored record per company–topic and replacing a 100%-manual curation process.
- Built a full-stack human-in-the-loop review tool - React 18 + TypeScript + Vite front end, FastAPI/Python back end, PostgreSQL, deployed on AWS - serving 21K topics and 200K+ product matches with sub-second fuzzy search and one-click approve/edit write-back to Databricks.
- Reduced per topic curation time drastically and enabled ability to maintain a topic catalog.

Software Engineering Intern

May 2025 – Dec. 2025

- Designed and built the backend pipeline in Python for a Revenue Growth & Market Analysis model, architecting a LangGraph DAG that orchestrates SEC filing ingestion and a trained SLM - deployed on AWS Agentcore.
- Drove data curation and normalization that boosted data completeness for 15M+ unique rows from 20% to 100%, then categorized them into a 180-class taxonomy to make the training set consistent.
- Shipped the model into production, powering market analysis for 75% of the tech companies in the Fortune 100.

University of Wisconsin-Madison

Sep. 2025 – May 2026

Undergraduate Research Assistant

Madison, WI

- Built a ML pipeline to classify natural speech from raw EEG signals, implementing the methodology from Berg et al. (2021) IEEE Paper in Python end-to-end - signal preprocessing and classification.
- Trained and evaluated multiple neural network architectures to improve classification, reaching 81% accuracy on recognizing critical Mandarin phonetic contrasts.
- Productionized an MCP server exposing the model via the local network, giving lab students a clean interface to run the neural network and classify Mandarin phonetics without any ML setup through Claude Code.

Aeries Technology

May 2024 - August 2024

Product Intern - Data Science

Mumbai, India

- Built a full-stack candidate-ranking tool with a React frontend and an agentic Python backend, cutting manual screening of hundreds of applicants from weeks to minutes.
- Developed REST APIs connecting the front end to the ranking service, with prompt-injection checks and output verification to keep rankings reliable.
- Containerized with Docker and deployed on GCP, running end-to-end from resume input to a ranked shortlist surfaced to HR.

PROJECTS

Wisconsin Racing

Sept 2025 - Current

- Led the design for the steering-wheel firmware and low-level control software in C on an ESP32, managing real-time driver inputs over CAN bus and analog potentiometers
- Built and programmed aerodynamic data-acquisition tools to record on-track performance, validated on the car at Ford's Wind Tunnel in Detroit, MI
- Placed 1st in Design, 1st in Acceleration, 3rd in Autocross, and 6th Overall at Formula FSAE Michigan 2026

TECHNICAL SKILLS

Languages: Python, Java, C/C++, JavaScript, SQL (Postgres), HTML/CSS, R

Frameworks & Libraries: FastAPI, React, Node.js, Flask, LangGraph, PyTorch, pandas, NumPy

Cloud & Infrastructure: AWS (Lambda, ECR, Bedrock, AgentCore), GCP, Docker, Databricks, CI/CD

Contributions & Achievements: Patent Filed for Novel Data Structure, Open Source Contribution to VSCode
